

Drills and Exercises

An exercise can test or evaluate emergency operation plans, procedures, facilities – or any combination thereof. Often, operators struggle to find capable and qualified staffing to fill the roles of emergency response organizations. Wild Well has the distinctive ability to match expert exercise practitioners with real world response experience from veteran well control engineers to form an unprecedented team of source control and well control knowledge. Our experience in all facets of well control emergency response, incident management, and operations allows for realistic exercise development and value-added evaluations and recommendations for improvement that are based on past experiences and best practices in the field.

Wild Well can assist multiple roles that a functional or table top exercise requires. Our practitioners are qualified to assist with exercise design/pre-planning, or to act as players, simulators, controllers, and evaluators.

Exercises are completed using both Well Control Emergency Response Plans (WCERP) and Source Control Emergency Response Plans (SCERP).

- WCERP – Land and Shallow Water Well Control Emergency Response
- SCERP – Deepwater, Subsea Well Control Emergency Response

Response Drills and Exercises

A variety of WCERP and SCERP drills and exercises ensure peak readiness and competency for operational equipment and personnel.

Plan Rollout — provides an overview of the key points of the plan through an interactive presentation focused on well control incident levels, responses, and management

Tabletop Exercise — an internal drill that reinforces incident response preparedness by working through a scenario using the processes and procedures detailed in the plan

Or simply fill out an Information Request using the QR Code below.

Functional Exercise — simulates an emergency in the most realistic manner possible, short of moving real people and equipment to an actual site. Its goal is to test or evaluate the capability of one or more functions in the context of an emergency event.

**SCERP & Logistics Plan Rollout/
Implementation**

— a 2-day course that provides a strategic response management overview for an incident involving an uncontrolled subsea well control event. Course covers of five modules:

- Source Control Management Overview
- Logistics Planning Considerations
- Logistics Plan Overview
- SCERP Plan Overview
- WellCONTAINED Equipment Overview
