

Gas Storage Services

Wild Well is the world's leading provider of emergency response services to oil and gas well control and pressure control events. We also are experienced in responding to well control emergencies at storage well systems and facilities. Our capabilities includes emergency response, firefighting, relief well planning, pressure control, leak mitigation services, environmental assessments, and well integrity audits.

In addition, Wild Well has experience in providing various non-emergency services to assist the Storage Well Operator in mitigating risks specific to well control during storage well operations. These services include various engineering, environmental, and advanced engineering services.

Emergency Response Services

- Emergency well control/firefighting response
- Pressure control/leak mitigation
- Relief well planning and drilling
- Hot tap, valve drilling, freeze, and cutting

Contingency Planning

- Well control emergency response plan
- Emergency response drills and training
- Incident management training

Engineering Services

- Relief well strategy and planning
- Well integrity audits

Environmental Services

- Environmental assessment
- Pollution mitigation oversight
- Pollution response drills and training
- Environmental restoration technical support

Advanced Engineering

- Atmospheric dispersion modeling
- Radiant heat modeling and analysis
- Erosion analysis
