

Risk Dashboard for Gas Storage Operations

A risk dashboard will be developed specifically for a gas storage operator's field and wells based upon the client's existing risk framework. Wild Well will deliver a risk dashboard that incorporates the client's relevant data; allowing client's to analyze and investigate trends of their collected information.

Development of the risk dashboard will include One (1) Risk Management Technician reviewing and collecting relevant client data. The Risk Dashboard file (PowerBi) will be provided upon acceptance by the client.
