

Well Schematic Services

Our Risk Management team can create wellhead and wellbore (casing) diagrams for a client's wells in their fields. If the client has existing data, our team will create standardized schematics for all of the client's wellheads and wellbores. If there is not existing data on the wells our team can conduct site visits to obtain that information.

The Well Schematics may include:

- Wellhead:
 - All Wellhead components
 - All Tree components
- Wellbore:
 - Well Type
 - Well Location
 - Casing Summary
 - Formation Summary
 - Casing Diagram

A typical well schematic project will involve initial data sharing to allow Wild Well's Risk Management team to create a template for both wellhead and wellbore schematics so that the client's information is standardized and includes all the client's requisite information.

For all your Well Schematic services needs, contact Risk Management Services at:
